

The state-of-the-art multi-spectral infrared technology of ESP Safety's Model **IPES-IR4000** Flame Detector affords the highest sensitivity in detecting flames from combustible vapors gases within its 120° conical field of view.

IPES-IR4000's advanced detection technology ensures rapid flame recognition and alarm signaling. In addition, **IPES-IR4000's** selective, multi-spectral technology virtually eliminates false alarms. It ignores false triggers from sources such as direct or indirect sunlight, arc welder flash, resistive heaters, fluorescent, halogen, and incandescent light.

IPES-IR4000 sends an alarm only when data from multiple different IR wavelengths agree that a flame or fire is present in the field of view. Upon confirmation of flame or fire, the **IPES-IR4000** transfers alarm signals to receiving control devices located in control and operations rooms and to fire alarms and burglar/fire alarm systems.

While operating, the **IPES-IR4000** transmits detector-status information via:

- Source analog 4-20mA output
- A standard RS-485 communication channel under protocol Modbus RTU
- HART Communication
- Relay outputs

The **IPES-IR4000** Flame Detector is constructed with an explosion-proof housing for use in hazardous (classified) locations.
